## NISSAN PATROL

Towball download	Vehicle Mass
250kg	GVM (all models)
300kg	Reduce loaded vehicle mass below GVM <sup>#</sup> by 70kg
325kg	Reduce loaded vehicle mass below GVM <sup>#</sup> by 100kg
350kg	Reduce loaded vehicle mass below GVM <sup>#</sup> by 130kg

If the loaded vehicle mass is reduced as shown in the table, the towball download can be increased correspondingly. Accordingly, if the laden mass is 130 kg less than the GVM<sup>#</sup> a towball download of 350 kg is approved. Different trailer types and different trailer manufacturers have varying towball downloads. The customer will need to contact the trailer manufacturer for information as to the download. Nissan does not recommend the fitting of load levelling or weight distribution devices when used with a Nissan Genuine towbar. When fitted and used correctly, the Nissan Genuine towbar is capable of meeting the towbar/towball capacity stated in the above table.

<sup>^</sup>Vehicle towing capacity is subject to towbar/towball capacity and design. Towing capacity may be reduced if a non genuine Nissan towbar is fitted. Please refer to the Genuine accessory brochure for towbar capacity information.

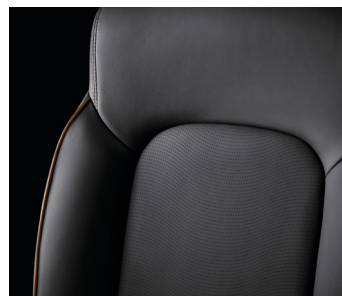

<sup>†</sup>Leather accented features and upholstery may contain synthetic material.

<sup>#</sup>GVM = Gross Vehicle Mass. GVM is the maximum laden mass of a motor vehicle.

<sup>^</sup>Figures tested in accordance with ADR81/02(combined test). Figure's stated for the purpose of comparison amongst vehicles only. Actual fuel consumption depends on factors such as traffic conditions, vehicle condition, how you drive and any accessories fitted.

<sup>†</sup>iPod is a registered trade mark of Apple Inc.

<sup>\*\*</sup>AVM is a driver's aid only. It cannot completely cover blind spots, and may not detect moving objects. Always check surroundings before moving vehicle.
